

Azure AI Intent Routing Bot

Hybrid routing pattern for chatbot dialogs, fallback, and workflow handoff

PROBLEM

Bot responses can become unreliable when user messages contain mixed intent, missing details, or vague wording.

APPROACH

Used Azure Bot Framework SDK v4 concepts, intent classification, Waterfall Dialog-style steps, middleware-style validation, state management, and structured handoff payloads.

ARCHITECTURE

User message -> middleware validation -> intent classification -> dialog router -> workflow or knowledge response -> state update -> Adaptive Card/text response.

MY CONTRIBUTION

Dialog-flow design, sample payloads, routing rules, fallback scenarios, support notes, and troubleshooting documentation.

SKILLS

Azure Bot Framework SDK v4, Azure OpenAI, Azure CLU concepts, C# .NET, JavaScript, Adaptive Cards, JSON, App Insights, CI/CD.
