

Power Platform Finance Automation

OCR-assisted extraction and reconciliation workflow for finance operations

PROBLEM

Manual review of PDFs, images, and spreadsheets slowed finance reconciliation and increased the chance of data-entry errors.

APPROACH

Designed OCR-assisted extraction, field validation, structured outputs, reconciliation checks, and dashboard-ready review datasets.

ARCHITECTURE

PDF/image input -> OCR/parsing layer -> validation rules -> structured output -> reconciliation checks -> Power BI/Excel review.

MY CONTRIBUTION

Extraction fields, parsing logic, validation checks, reporting templates, exception outputs, and review-ready datasets.

SKILLS

Python, OCR concepts, Excel, SQL concepts, Power Automate patterns, Power BI, JSON, CSV.
