

Portfolio case studies

A recruiter-friendly map of end-to-end automation work across ITSM, conversational AI, finance document processing, REM-card reconciliation, and reporting.

[Start here - open the PDF summaries first](#)

How to navigate: Each numbered folder contains a PDF case study for quick review and a matching implementation folder with sanitized workflow examples, sample payloads, data models, test scenarios, and notes.

Case studies

Folder	What HR will understand	Primary skills
01 - ITSM Copilot Support Automation	How a support request becomes a routed case, approval, escalation, and measurable resolution.	Copilot Studio, Power Automate, Dataverse, ITSM, Power BI
02 - Finance REM-Card Reconciliation	How handwritten physical REM cards become structured finance data with reconciliation and variance review.	OCR, document capture, finance controls, reconciliation, reporting
03 - Finance Document Automation	How invoices and semi-structured documents move through extraction, normalization, validation, and reporting.	Python, AI Builder, Excel, SQL, Power Automate, Power BI

ITSM

Support intake and handoff

REM

Handwritten finance records

OCR

Document extraction

BI

Actionable reporting

Portfolio note

Project names and data are anonymized for NDA safety. The case studies describe the process, data flow, controls, responsibilities, and technology patterns without exposing confidential client information.
